DANIELSON CONNECTICUT

FOREWORD

To our many friends who have ordered from us in the past and to those new customers whom we have yet to call "friends" a sincere welcome to another year with Logee's.

Our greenhouses were founded in 1892 by William D. Logee who was one of the original house plant collectors. His love for plants was his primary purpose in choosing a career in horticulture and our botanical collection contains many interesting and rare specimens. A visit to our greenhouses is a rewarding experience. We have one of the finest collection of Begonias in the country — over 500 named varieties — as well as a large selection of geraniums and exotics. Of special interest is the sprawling Acacia, huge Ponderosa Lemon, Navel and Dwarf Oranges, very old Staghorn Fern, Bougainvilleas, Passion Flowers, golden Allamanda, and many others.

A friendly invitation is extended to all who wish to visit us. Our greenhouses are always open and you are always welcome — Sundays, holidays, and evenings. We are located one mile north from the center of Danielson, just off Conn. Route 12, and 5 miles west of the R.I. end of the Conn. Turnpike, Route 95; 'phone PRescott 4-8038.

IMPORTANT NOTICE:

We are one of the few firms who actually grow what we sell. Due to the heavy demand for some of our rare varieties, we are sometimes over-sold. Mentioning 2nd choice will put your order "in orbit."

TERMS OF SALE

MINIMUM ORDER \$5.00; PLEASE ADD 50c to defray postage; 50c additional for Special Delivery. Airmail \$2.00. (If necessary, customer will be billed for any additional amount.)

REX BEGONIAS

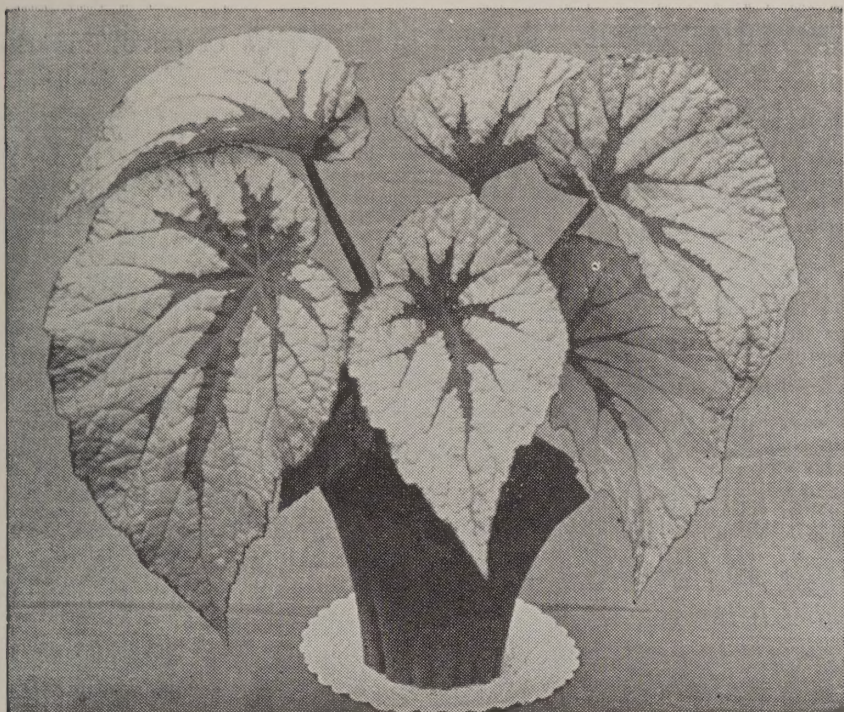

CULTURAL HINTS

* Indicates New Items.

These are shade loving varieties. Keep away from direct sunlight. Good potting mixture contains equal parts peat moss, sand, and soil rich in humus. Spaghnum moss is also an excellent growing medium. Do not press soil hard because begonia roots are fine. Feed once a month with any good liquid fertilizer. Don't discard if a plant drops its leaves; it will grow again from the old roots although it sometimes takes 3 months. Leaves of Rex Begonias are excellent for flower arrangements. These "painted leaf" begonias are difficult to describe since color varies from young to mature plants; from one leaf to another on the same plant; from more or less exposure to sun or shade.

SILVER PREDOMINATING

- A. D. DAVIS.** Medium leaves of silver gray. Brownish gray at the margin in striking contrast. 75c

HIEMALIS HYBRIDS

(Christmas or winter-flowering Begonias)

* Indicates New Items.

These will grow and bloom best in a well lighted window; occasional turning of the plant will prevent one-sided growth. Water carefully—never allow plants to become dry but never let water stand in the saucer. Best potting mixture is equal parts peat moss, sand, and soil rich in humus. Leaf mould is excellent as well as decayed cow manure—especially where soils are heavy. Add to the above mixture a three inch pot of complete (organic) fertilizer per bushel of soil.

CACTUS, TUBEROUS ROOTED AND RARE

Very interesting group. Most of the species grow from so called tubers, or fleshy roots. Dormant during the summer months for us, and through this period they should be kept dry. Growth starts in the early Fall. Water sparingly, gradually increasing the amount until full growth. Requires copious watering in flowering period, which for us is from January to June on most varieties. The tubers can be re-potted as required in sandy soil, adding bone meal for fertilizer.
